Project for testing

For testing, a web project [Sports Corner](#) is selected. On this web project, the current league positions of teams of the top five football leagues are shown. One has to be a registered user and be logged in to be able to use the site.

The project is available at <https://github.com/MdSiamAnsary/SportsCorner> .

For registration, one has to provide four pieces of information on mandatory basis. They are

- Username
 - Username has to be of length between 6 and 20
 - A particular username can belong to only one user at a time
- Email
 - Email has to be valid
 - A particular email can belong to only one user account at a time
- Password
 - Password has to be of length between 6 and 10
 - A particular password can belong to only one user at a time
- Gender
 - One can pick gender from three options which are male, female and others.

To sign in, one has to provide registered and valid email address and password which are associated with the same registered account. If a user is successfully registered, only then s/he can log in to the system. As information provided while registering is saved in the database, the valid email address and password are checked with the database when someone tries to log in and if the email and password don't belong to a registered user, one cannot log in.

In the web project, in the homepage, one can see the top four position holders of La Liga, English Premier League, Bundesliga, Ligue 1 and Serie A. For each of these leagues, individual pages are there where the full league tables are displayed along with information about UEFA Champions League qualification and league promotion or, relegation rules. One can easily navigate the site and when using the site, according to one's need, one can log out or navigate to any of the pages.

Test Case designing

Based on user perspective, the web project has about three aspects for testing. They are

- User registration
- Log in
- Navigation of the webpages and log out

While registering, the values of the fields can be tested with different values that are valid or invalid.

For registering, username can be of length between 6 and 20 and it's a mandatory input field. Hence, for testing, inputs for username can be as below. This is done with robustness boundary value checking.

- Blank username field
- Username with length 5
- Username with length 6
- Username with length 7
- Username with length 13
- Username with length 19
- Username with length 20
- Username with length 21

For registering, password can be of length between 6 and 10 and it's a mandatory input field. Hence, for testing, inputs for password can be as below. This is done with robustness boundary value checking.

- Blank password field
- Password with length 5
- Password with length 6
- Password with length 7
- Password with length 8
- Password with length 9
- Password with length 10
- Password with length 11

For registering, a valid email address is necessary on mandatory basis. Hence, for testing, inputs for the email field can be as below. These scenarios are done with the equivalent class approach.

- Blank email field
- Provided email address is valid

- Provided email address is invalid

For registering, one has to choose gender among male, female and other. Hence, for testing, inputs for the gender field can be as below. These scenarios are done with the equivalent class approach.

- Male
- Female
- Other

For log in purpose, a valid email address and password are to be registered and associated with one single account.

For log in, a valid registered email address is necessary. Hence, for testing, inputs for the email field can be as below. These scenarios are done with the equivalent class approach.

- Blank email field
- Provided email is valid and is registered
- Provided email is valid and is not registered
- Provided email is invalid

For log in, a registered password is necessary. Hence, for testing, inputs for password can be as below. These scenarios are done with the equivalent class approach.

- Blank password field
- Provided password is registered
- Provided password is not registered

Two more scenarios are possible. They are as below.

- Registered email and registered password are associated with same account
- Registered email and registered password are not associated with same account

After successful login, the user goes to the homepage. Then, the following scenarios are possible.

- User is in homepage
 - User can load homepage
 - User can go to La Liga page
 - User can go to English Premier League page
 - User can go to Bundesliga page
 - User can go to Ligue 1 page
 - User can go to Serie A page
 - User can log out
- User is in La Liga page through navigation

- User can go to homepage
- User can load La Liga page
- User can go to English Premier League page
- User can go to Bundesliga page
- User can go to Ligue 1 page
- User can go to Serie A page
- User can log out
- User is in English Premier League page through navigation
 - User can go to homepage
 - User can go to La Liga page
 - User can load English Premier League page
 - User can go to Bundesliga page
 - User can go to Ligue 1 page
 - User can go to Serie A page
 - User can log out
- User is in Bundesliga page through navigation
 - User can go to homepage
 - User can go to La Liga page
 - User can go to English Premier League page
 - User can load Bundesliga page
 - User can go to Ligue 1 page
 - User can go to Serie A page
 - User can log out
- User is in Ligue 1 page through navigation
 - User can go to homepage
 - User can go to La Liga page
 - User can go to English Premier League page
 - User can go to Bundesliga page
 - User can load Ligue 1 page
 - User can go to Serie A page
 - User can log out
- User is in Serie A page through navigation
 - User can go to homepage
 - User can go to La Liga page
 - User can go to English Premier League page
 - User can go to Bundesliga page
 - User can go to Ligue 1 page
 - User can load Serie A page
 - User can log out

From the different scenarios discussed, test cases are designed and testing is done. When preparing the test cases, it has been assumed that the database for the system has no information initially before testing with the prepared test cases. Also, the test cases for testing user log in and test cases for testing navigation and log out depend on the successful run of the test cases for testing user registration.

It is to be noted that username, email and password need to be unique for each user. In the test cases for testing user registration, scenarios and inputs have been specified. Thus, the test cases that lead to successful registration, if run again, may not lead to successful registration as the email, username and password may already be registered, but, if the database is cleared, then, the same test cases may lead to successful registration if run again.
